Reporter: Bashiul Alam Sabab
Tested on Google Chrome
Device OS: Windows 11 and MacOS 12.5

The points which cannot be classified as bugs because they can be part of feature or the way it was intended to be implemented are listed in this document:

1. In sign in form, user can paste from clipboard in "Password" field
2. Search with a text which will not yield any result in "Projects" dashboard does not hide the existing entries (📄 Screenshot 2022-08-13 at 10.58.21 AM.png). The matched search pattern is highlighted within the entries which is a bit hard to distinguish with the background color that is used.
3. Clicking on the "Export" option from Dashboard did not trigger any file download nor any user action was triggered after clicking on the "Import" option. It is a bit confusing as the notification panel at the bottom has one particular message written: "Download Done".
4. Data sources can be created with duplicate names and duplicate source URLs (📄 Screenshot 2022-08-13 at 1.18.10 PM.png).
5. In Data Sources, after creating a source, if I click on the Active button the UI gives an error toast. If I click on Paused and then on Active the Ui gives a success toast. After that clicking on Active does not throw that error toast anymore.
6. For HTTP Request header and additional form fields in adding Exports A/B item, invalid JSON body is not validated (📄 Screenshot 2022-08-13 at 2.29.46 PM.png).
7. Column views option in Dataflow do not have any other option but "All" (📄 Screenshot 2022-08-13 at 3.53.56 PM.png).
8. Downloaded CSV from Data View contains some hash values in file name (📄 Screenshot 2022-08-13 at 4.02.35 PM.png).
9. After adding a term to a list the success toast contains the message "You added successfully the list item" which should be "You have successfully added a term to the list item".
10. There are filtering and selection options in the Reporting menu but I could not generate any report. Every time clicking on the Apply button triggered the same message that time is in UTC zone and a prompt text "No data available for selected date range".
11. Triggering the state change to "Paused" from the top right option always gave the error message that "Failed to update the status".
